

# environmental services

## Project description

EMCOR UK, in partnership with the customer, installed, monitored, and verified an award-winning washroom solution, including the latest low-volume flush cisterns, urinal controls, and sensor taps.

## Key benefits

- ▲ The trial reduced water use by more than 80%. Over one year, both washrooms were saving the equivalent water to supply an extra 1,285 homes
- ▲ In 2016, the project achieved the Institution of Civil Engineers' Chris Binnie Award for Sustainable Water Management. The project clearly demonstrates industry-leading innovation, outstanding savings in water use, and wide potential applicability

## About the customer

This private utility company is responsible for the public water supply and waste water treatment in large parts of Greater London and other areas of the United Kingdom.
